

**Whether as replacements for FREEMAN products or for new construction, FREEMAN superior gaskets are available in many profiles and in virtually any length.**

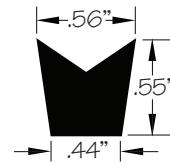

FREEMAN gaskets provide a secure seal, protecting all types of closures from the onslaught of elements. Available for a wide selection of uses, FREEMAN quality standards require our gaskets to be made to demanding marine environment specifications.

**CUT-TO-LENGTH:** It is common to provide cut-to-length gasket to customers for new construction or replacement into existing closures. FREEMAN MARINE'S automated cutting system assures smooth ends and precise angles. At customer request, FREEMAN MARINE can cut-to-length and construct bonded gaskets. When fitting or sizing a gasket, care should be taken that the gasket is not stretched during installation [a good rule of thumb is to add one additional inch or fraction thereof for each 72 lineal inches where the gasket is to be installed].

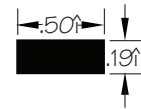

**REPLACEMENT:** Replacement gasket for every closure FREEMAN MARINE manufactures is available. Information describing the closure will enable our staff to provide timely support.

**SPECIAL APPLICATION USAGE:** Intended service will determine material selection, durometer / hardness, and shape for each gasket requirement. FREEMAN MARINE takes gaskets seriously, the most common element of all closures. No closure will function properly unless the appropriate gasket is utilized.

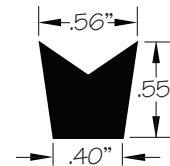

FREEMAN MARINE carries a large inventory of a variety of different gaskets; most profiles are available for shipment from stock.
